

# Horizon 2020 Project - ReFreeDrive

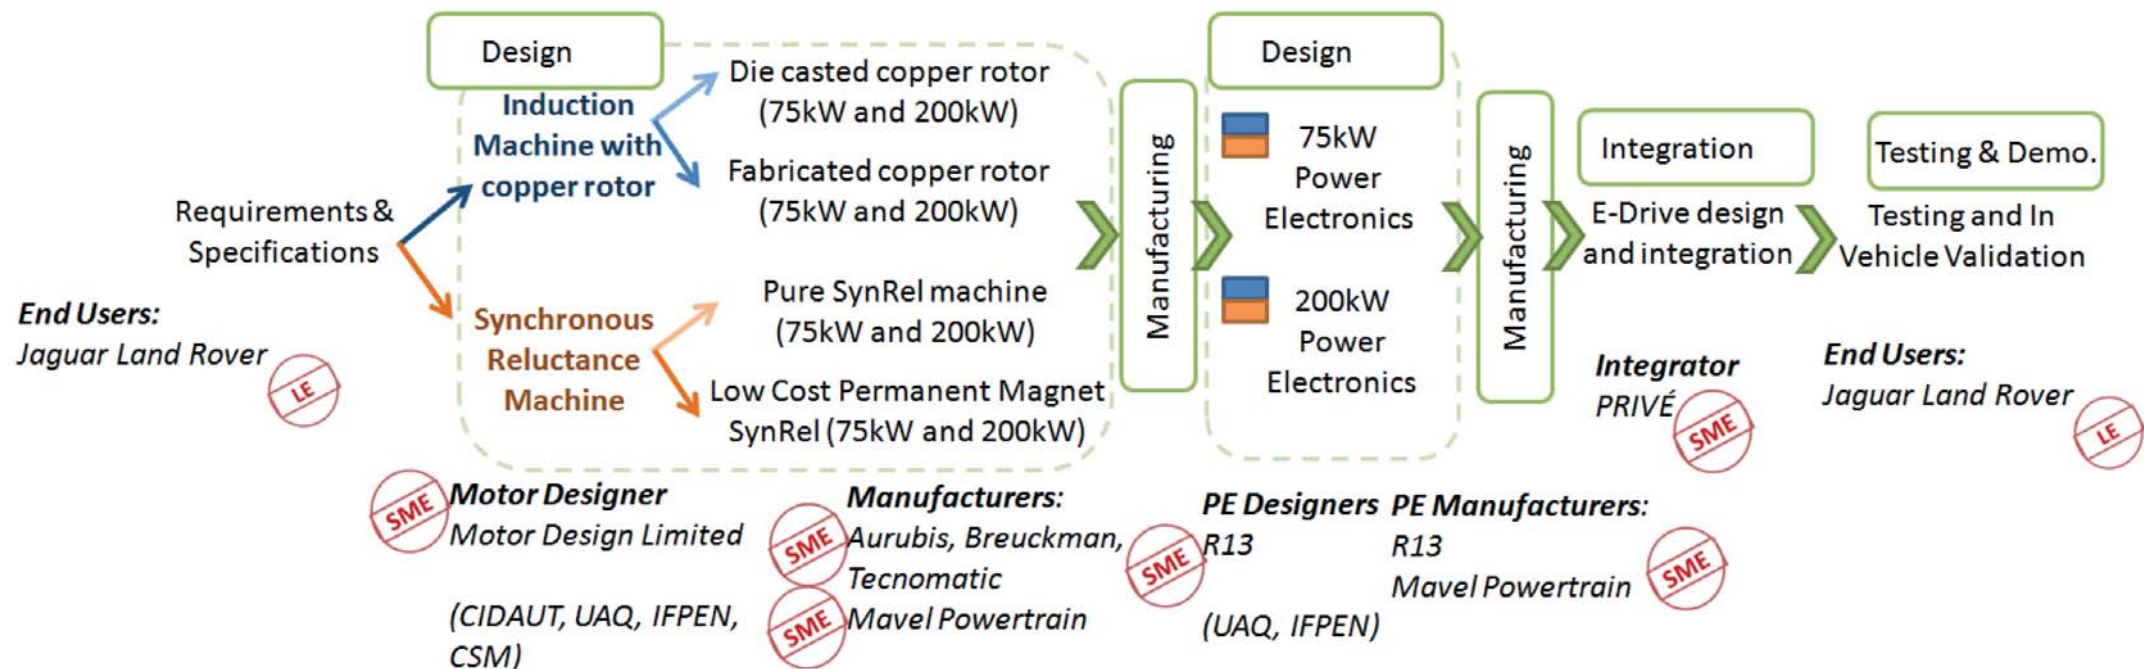

## PROJECT AIM

The main aim of this project is to develop rare earth-free traction technologies beyond their current state-of-art, with a strong focus on industrial feasibility for mass production, targeting lower costs with higher specific torque and power density.

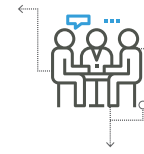

The ReFreeDrive Consortium composed of 13 partners in six European countries has been qualified for a total EU Contribution of about 6M€.

## PROJECT OVERVIEW

# Horizon 2020 Project - ReFreeDrive

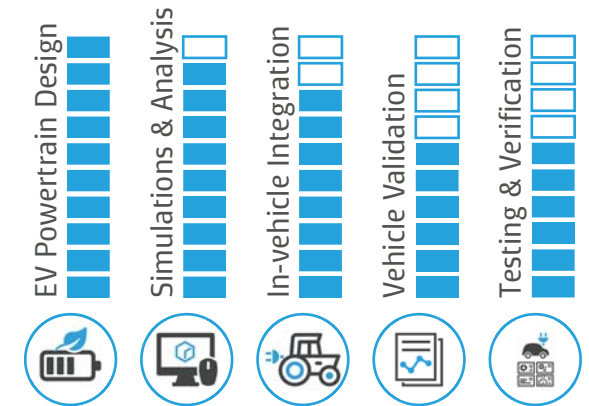

## DESCRIPTION

Within this consortium Privé plays an important role covering the function of technical specifications of the powertrains and their integration on the vehicle using the powertrains and controls developed by the partners.

## APPLIED SKILLS

## INDUCTION MACHINES
